1. Permits, Change, Transfer, Renewal, Sale

The Permittee has submitted an application to the DOGM to modify the BTU resource recovery plan for the waste rock pile. Two changes have been proposed: 1) the usable volume will be increased from 15, 000 tons to 100,000 tons, and 2) the usage process is being changed from crushing and blending of the material with coal, to air jiggling the material in order to clean it and returning any generated reject to the Savage pile for permanent disposal. Review of this application is pending.

3. Topsoil

The site's single topsoil pile was inspected this day. There were no coal fines observed on this pile. The signs required by the R645 coal rules are in place and are maintained. The vegetation on the pile appears to be halogeton. A few clumps of grass were observed in depressions.

8. Noncoal Waste

A derelict wooden pallet, and two pieces of corrugated culvert material were observed adjacent to the pump house on the NE corner of the property. Mr. Guy agreed to have the Permittee properly dispose of these.

18. Support Facilities, Utility Installations

The Permittee has received an authorization to proceed with the construction of the new maintenance shop (TASK ID# 2059, OGM approval 12/23/04) from the Savage Industries Board of Directors. The project is waiting on a building permit approval from Carbon County.
